

The current status of circularity in Europe and the expectations architects have towards the future.

What is circular construction economy for the architect?

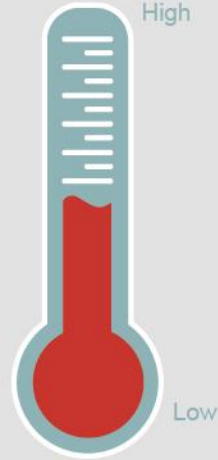

Top-5 characteristics	Different understanding of the concept		
	Europe	Italy	Netherlands
Re-use of materials by other users	34%	17%	56%
Recycling of waste	28%	38%	23%
Use of biobased building materials	15%	32%	5%
Limiting waste	14%	38%	12%
Optimization of resources used and environmental impact via Life Cycle Assessment (LCA)	10%	12%	10%

(Strongly) agree (Europe)

I design buildings that are easy to transform or dismantle **41%**

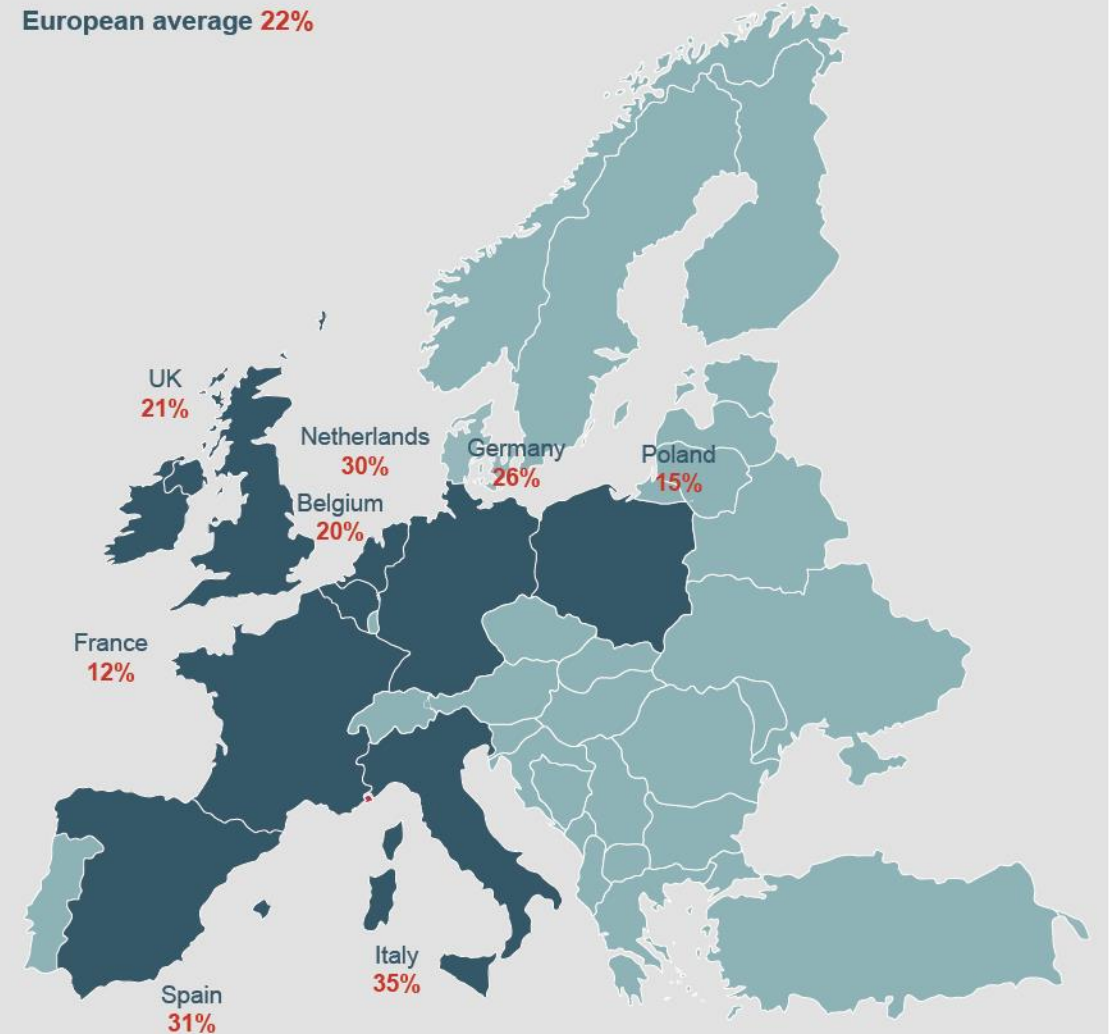

I advise on sustainable building methods **69%**

I specify more sustainable materials **67%**

Share of projects in which circularity is taken into account

European average **22%**

By when to expect a fully circular construction economy? (Europe)
